

1-4. (CANCELED)

5. (NEW) A hydraulic system, in which pressure medium from a pressure medium reservoir (2) is delivered by a pressure medium source (1) to at least one consumer (10, 12, 13, 14) with a piston space (7) and at least two pressure medium delivery lines (6, 8), such that when the at least one consumer (10, 12, 13, 14) is in a non-actuated condition a first pressure medium delivery line (8) is connected to the pressure medium reservoir (2) and a second pressure medium delivery line (6) is connected to the pressure medium source (1), when the at least one consumer (10, 12, 13, 14) is in an actuated condition, the first and second pressure medium delivery lines (6, 8) are both connected to the pressure medium source (1) and the pressure level in the first and second pressure medium delivery lines (6, 8) is the same.

6. (NEW) The hydraulic system according to claim 5, wherein the first pressure medium delivery line (8) can be connected by a 3/2-way valve (3) to one of the pressure medium source (1) or the pressure medium reservoir (2).

7. (NEW) The hydraulic system according to claim 5, wherein the second pressure medium delivery line (6) is connected via a throttle point (5) to the pressure medium source (1).

8. (NEW) The hydraulic system according to claim 6, wherein a pressure-limiting valve (15) is arranged between the 3/2-way valve (3) and the at least one consumer (10, 12, 13, 14).
